HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Edward J. Stemberger (Reg. No. 36,017) on January 14, 2009.

The claims have been amended as follows:

1. (Currently amended) A method in a channel adapter, the method comprising:
receiving a link management packet from a link partner and in response
selecting, according to InfiniBand TM protocol, a selected active link width of a physical
link;
setting a multiplexer circuit, configured for selectively switching frame data of a
prescribed maximum link width to a selected one of a plurality of available link widths, to
the selected active link width;
receiving the frame data from an output buffer according to the prescribed
maximum link width; and
outputting the frame data from the multiplexer circuit to a transmit bus according
to the selected active link width;

wherein the multiplexer circuit includes a first multiplexer for outputting the frame data onto a first output according to a first of the available link widths, and a second multiplexer circuit, distinct from the first multiplexer, configured for switching the frame data onto a second output according to a second of the available link widths, the setting step including selecting one of the output buffer, the first output, and or the second output for transfer of the frame data according to the selected active link width.

2. (cancelled)

Claim 3, line 1: change "The method of claim 2" to "The method of claim1".

6. (Currently Amended) A channel adapter comprising:

a memory configured for storing port configuration settings, including a selected active link width of a physical link based on a received link management packet according to InfiniBand™ protocol and sent by a link partner; and a link layer module including:

(1) a multiplexer circuit configured for selectively switching frame data of a prescribed maximum link width to a selected one of a plurality of available link widths for transmission onto a transmit bus, and

(2) a bus controller configured for setting the multiplexer circuit to switch the frame data to the selected active link width;

wherein the multiplexer circuit includes a first multiplexer for outputting the frame data onto a first output according to a first of the available link widths, and a second multiplexer circuit, distinct from the first multiplexer, configured for switching the frame data onto a second output according to a second of the available link widths, the bus controller configured for selecting one of the prescribed maximum link width, the first output, and or the second output for transfer of the frame data according to the selected active link width.

7. (cancelled)

Claim 8, line 1: change “The channel adapter of claim 7” to “The channel adapter of claim 6”.

Claim 9, line 1: change “The channel adapter of claim 7” to “The channel adapter of claim 6”.

2. The following is an examiner’s statement of reasons for allowance:

The present invention is directed to an Infiniband method/channel adapter comprising multiplexers to transmit data according to link width selection. Each of independent claims 1 and 6 identifies the uniquely distinct features:

“wherein the multiplexer circuit includes a first multiplexer for outputting the frame data onto a first output according to a first of the available link widths, and a second

Art Unit: 2416

multiplexer circuit, distinct from the first multiplexer, configured for switching the frame data onto a second output according to a second of the available link widths, the bus controller configured for selecting one of the prescribed maximum link width, the first output, and or the second output for transfer of the frame data according to the selected active link width.”

The closest prior art, McConnell in view of Bunton disclose conventional Infiniband link width controls, in combination, fail to render the above features obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Gregg (US 2004/0013088) describing link width considerations for Infiniband data transmissions, Mann (US 2004/0210687) describing multiplexer & demultiplexer 215, 236 implementing lane width changes, Harrekilde-Pertersen (US 7,342,889) describing means comprising lane aligner for Infiniband, and Bunton (7,059,629) describing multiplexer along with link widths for Infiniband.
